

** FAB INDEX – PRESS RELEASE **

The technical bit...

Over the month to 31 March 2019, First Actuarial's Best estimate (FAB) Index improved, with the surplus in the UK's 5,450 defined benefit (DB) pension schemes increasing from £441bn to £446bn.

The deficit on the PPF 7800 Index grew over March 2019 from £8.6bn to £43.9bn, with the funding ratio reducing from 99% to 97%.

These are the underlying numbers used to calculate the FAB Index:

FAB Index over the last 3 months	Assets	Liabilities	Surplus	Funding Ratio	'Breakeven' (real) investment return
31 March 2019	£1,649bn	£1,203bn	£446bn	137%	-1.3% pa
28 February 2019	£1,603bn	£1,162bn	£441bn	138%	-1.1% pa
31 January 2019	£1,603bn	£1,167bn	£436bn	137%	-1.0% pa

The overall investment return required for the UK's 5,450 DB pension schemes to be 100% funded on a best estimate basis – the so called 'breakeven' (real) investment return – has decreased slightly to minus 1.3% pa. That means the schemes need an overall actual (nominal) return of 2.4% pa for their assets to meet liabilities.

The assumptions underlying the FAB Index are shown below:

Assumptions	Expected future inflation (RPI)	Expected future inflation (CPI)	Weighted-average investment return
31 March 2019	3.7% pa	2.7% pa	4.1% pa
28 February 2019	3.6% pa	2.6% pa	4.3% pa
31 January 2019	3.5% pa	2.5% pa	4.2% pa

Ends

Notes to editors

The FAB Index is calculated using publicly available data underlying the PPF 7800 Index, which aggregates the funding position of 5,450 UK DB pension schemes on a section 179 basis, together with data taken from The Purple Book, jointly published by the PPF and the Pensions Regulator.

The FAB Index is updated on a monthly basis, providing a comparator measure of the financial position of UK DB pension schemes.
