

FAB INDEX

The technical bit...

Over the month to 29 February 2020, First Actuarial's Best estimate (FAB) Index fell slightly, with the surplus in the UK's 5,422 Defined Benefit (DB) pension schemes decreasing from £400bn to £397bn.

The deficit on the PPF 7800 Index also worsened during February 2020, increasing from £74.7bn to £124.6bn, with the funding ratio falling from 96% to 93%.

The underlying numbers used to calculate the FAB Index are as follows:

FAB Index over the last 3 months	Assets	Liabilities	Surplus	Funding Ratio	'Breakeven' (real) investment return
29 February 2020	£1,721bn	£1,324bn	£397bn	130%	-1.4%
31 January 2020	£1,734bn	£1,334bn	£400bn	130%	-1.4%
31 December 2019	£1,740bn	£1,345bn	£395bn	129%	-1.4%

The overall investment return required for the UK's 5,422 DB pension schemes to be 100% funded on a best-estimate basis – the so called 'breakeven' (real) investment return – has remained at minus 1.4% pa. This means the schemes need an overall actual (nominal) return of 1.6% pa for their assets to meet liabilities.

The assumptions underlying the FAB Index are shown below:

Assumptions	Expected future inflation (RPI)	Expected future inflation (CPI)	Weighted-average investment return
29 February 2020	3.0% pa	2.2% pa	2.9% pa
31 January 2020	3.0% pa	2.3% pa	2.9% pa
31 December 2019	3.2% pa	2.4% pa	3.2% pa

Notes

The FAB Index is calculated using publicly-available data underpinning the PPF 7800 Index – which aggregates the funding position of 5,422 UK DB pension schemes on a section 179 basis – together with data taken from The Purple Book, published jointly by the Pension Protection Fund (PPF) and The Pensions Regulator.

The FAB Index is updated on a monthly basis, providing a comparator measure of the financial position of UK DB pension schemes.
